Executive Summary

This report provides the monthly wind performance summary for **November 2012** of the 50m Wind Met-Tower at the New Mexico State University Agricultural Science Center at Clovis. The site is located at the Center's facility area which has flat agricultural landscape that includes grass, crops, and bare soil. The wind met-tower is installed at coordinates 34.606075° N and -103.301602° W at an altitude of 1363 meters.

Wind speed and direction monitoring are conducted at three heights: 50 m, 40 m, and 30 m. The **average wind speed** for the month of **November** at the highest level (50m height) was found to be **8.10 m/s** with **average temperatures** around **10.3° C**, while the predominant **wind direction** was from the **Southwest**.

Based on the average wind speed results, an approximation of energy production is conducted using a GE1.5 MW wind turbine for the sole purpose of estimating how much energy the site would yield if a turbine were to be installed. Any other turbine size and manufacturer could have been selected depending on preference and appropriateness. The **estimated energy production** for the month of **November** was approximately **615,679 kWh**. Power output was approximated based on the manufacturer's turbine power curve at 65 m hub height.

Graphs and figures in this report are for **30-day** periods from **November 1-30, 2012**.

Wind Monitoring Method description

The NRG Symphonie data logger is an internet ready, ultra-low power microprocessor-controlled data logging system specifically designed for the wind energy industry. The Symphonie logger has a fixed averaging interval of 10 minutes. Each of the 12 channels' averages, standard deviations, minimum and maximum values are calculated from continuous 2 second data samples. Data intervals are calculated every 10 minutes, time stamped with the beginning time of each interval and written to the MultiMedia Card (MMC) at the top of each hour. Symphonie Data Retriever (SDR) software is then used to process raw data files stored on the computer from an MMC.

Date of receipt of the raw data:

November 30, 2012

Dates of the performance of the monitoring:

November 1-30, 2012

Test description page(s):

Description of wind monitoring items: The 50-m met tower has four "1900 NRG #40C Calibrated Anemometers;" at 50, 40, and 30 meters; two "1904 NRG #200P Wind Direction Vane 10K" at 50 and 40 meters, as well as one "1906-NRG #110S Temperature Sensor with Radiation Shield". Data Symphonie NRG Logger.

Mfg:	NRG Systems
Models:	Anemometers: 1900-NRG #40 Wind Direction Vane: 1904-NRG #200P Temperature Sensor: 1906-NRG #110S Data logger: Symphonie NRG Logger

Conditions of the wind monitoring items: ***Working as specified***

Monitoring dates: November 1-30, 2012

Location of Monitoring: The place is an open space of about 2 acres located approximately 200 yards to the south from the Agricultural Science Center at Clovis's main building complex. There are obstacles (buildings, trees, etc) which can affect both, wind speed or wind direction sampling.

Monitoring Plan Description: The Symphonie logger has a fixed averaging interval of 10 minutes. Each of the 12 channels' averages, standard deviations, minimum and maximum values are calculated from continuous 2 second data samples. Data intervals are calculated every 10 minutes, time stamped with the beginning time of each interval and written to the MultiMedia Card (MMC) at the top of each hour.
